TITLE OF INVENTION: ANTHEORY CONJUGATE KITS FOR SELECTIVELY INHIBITING VEGF

TITLE OF INVENTION: ANTHEORY CONJUGATE KITS FOR SELECTIVELY INHIBITING VEGF

FILE REFERENCE: 4001.002586

CURRENT APPLICATION NUMBER: US/09/561,526

CURRENT APPLICATION NUMBER: 00/131,432

PRIOR APPLICATION NUMBER: 00/131,432

PRIOR PLING DATE: 1999-04-28

SOFTWARE: Patentin Ver. 2.0

SEQ ID NO 12

LENGTH: 573

TYPE: DAA

ORGANISM: Artificial Sequence

OTHER INFORMATION: Description of Artificial Sequence: SYNTHETIC

OTHER INFORMATION: OLIGONUCLEOTIDE

NAME/KEY: CDS

LOCATION: (1) ..(573)

GENERAL INCORNATION:

APPLICANT: Marc J. Rubenfield et al.

APPLICANT: Marc J. Rubenfield et al.

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS TITLE OF INVENTION: AEUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

FILE REPERENCE: 107196.136

CURRENT APPLICATION NUMBER: US/09/252,991A

CURRENT FILING DATE: 1998-02-18

PRIOR FILING DATE: 1998-02-18

PRIOR FILING DATE: 1998-02-18

PRIOR FILING DATE: 1998-07-27

NUMBER OF SEQ ID NOS: 33142

SEQ ID NO 2102
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ä

                                                                                                                                                                                                                     Sequence 1793, Application US/09252991A

Patent No. 6551795
GENERAL INFORMATION:
TITLE OF INVENTION: NUCLEIC ACID AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS
TITLE OF INVENTION: ARRUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: 107196.1131 US/09/252,991A
CURRENT RPELICATION NUMBER: US/09/252,991A
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         GENERAL INFORMATION:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               67

/done libs-"NCI CGAP END .
//done libs-"NCI CGAP END 2:
//done coll line (2 cell lines). The libs-ray was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into py773-Pac vector. The oligonocleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is CCGGTCACTC. The cell lines was provided by Dr James Martin from University of lowa.
                                                                                                                                                                                                                                                                                                                                                           CDNA Library preparation: Dr. M. Bento Soares, University of Iowa CDNA Library preparation: Dr. M. Bento Soares, University of Iowa DNA Sequencing by: Dr. M. Bento Soares, University of Iowa DNA Sequencing by: Dr. M. Bento Soares, University of Iowa from Dr. M. Bento Soares, Destribution information can be obtained from Dr. M. Bento Soares, bento-soares@ulowa.edu

The following repetitive elements were found in this cDNA sequence: 1-44, >POLY A#Simple_repeat (matched compliment)

/note="Organ: eye; Vector: pT7T3-Pac (Pharmacia) with a modified polylinker; Site 1: ECOR I; Site 2: Not I;
UI-E-EO1 is a normalized cDNA library containing the following tissue(s): fetal eye: The library was constructed according to Bonaldo, lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT7T3-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (GT7)18 tail. The sequence tag for this library is CGGGTATACC. This library was created for the program, Gene Discovery in the Visual System, supported by National Eye
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     116
